

## Downloading Statistics from the Circulation Manager Software

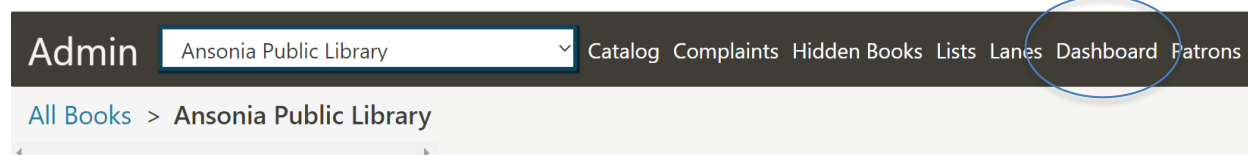

### Dashboard Link:

You can access your library dashboard at the following link:

<https://bibliomation.lyrasistechnology.org/admin>

If you do not have a login, ask your library director to create an account for you or email LYRASIS technical support at [simplye@lyrasis.zendesk.com](mailto:simplye@lyrasis.zendesk.com).

To download all "events" captured by the circulation manager, login to the "Dashboard," scroll to the bottom of the page, and click "Download CSV."

### Step #1

Download the CSV file – Click on the “Download CSV” button, pictured below, to start the download process.

### Step #2

Set the date range - In the pop-up window, select your time frame and leave the Event Type as "All Events." Once completed, click “Download.”

Download CSV

**Event Type**

**Start Date**

**End Date**

**Download**

**Close**

### Step #3

Reviewing events - The circulation manager tracks every single event, or transaction, from both your library and the vendors that provide the digital files to SimplyE. You will be able to view activity from vendors (even vendor apps, like Libby), but we assume your primary focus will be on your local library activity in SimplyE.

Below are the definitions of the events originating in SimplyE related to your specific library patrons:

1. circulation\_manager\_check\_out – A patron checked out a book through SimplyE
2. circulation\_manager\_check\_in – A patron returned a book through SimplyE
3. circulation\_manager\_hold\_place – A patron placed a hold through SimplyE
4. circulation\_manager\_hold\_release – A patron cancelled a hold through SimplyE
5. circulation\_manager\_fulfill – A patron downloaded a book through SimplyE. The patron might download the same book multiple times if using multiple devices or logging in and out, and each of these downloads will be tracked as a separate event. This event includes downloads of public domain books.
6. circulation\_manager\_new\_patron – A patron logged in to SimplyE for the first time.
7. open\_book – A patron opened a book in the SimplyE app

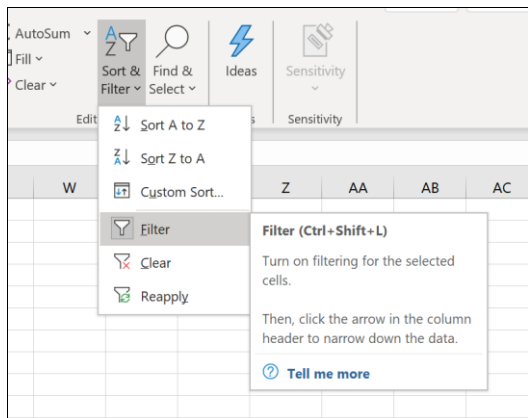

Other events you will see on the spreadsheet that are related to vendors:

1. distributor\_check\_out – A patron checked out a book through any app
2. distributor\_check\_in – A patron returned a book through any app
3. distributor\_hold\_place – A patron placed a hold through any app
4. distributor\_hold\_release – A patron released a hold through any app
5. distributor\_license\_add – The library added an additional license for a book
6. distributor\_license\_remove – The library removed a license for a book
7. distributor\_availability\_notify – A patron had a hold on a specific book, and it became available for checkout
8. distributor\_title\_add – The library added a new title to the collection
9. distributor\_title\_remove – The library removed a title from the collection

#### Step #4

Sorting the spreadsheet – To better parse the data, it is often easier to sort or filter the CSV spreadsheet. One option is to sort column b (event) from A-Z to view the circulation manager events related to your library all together.

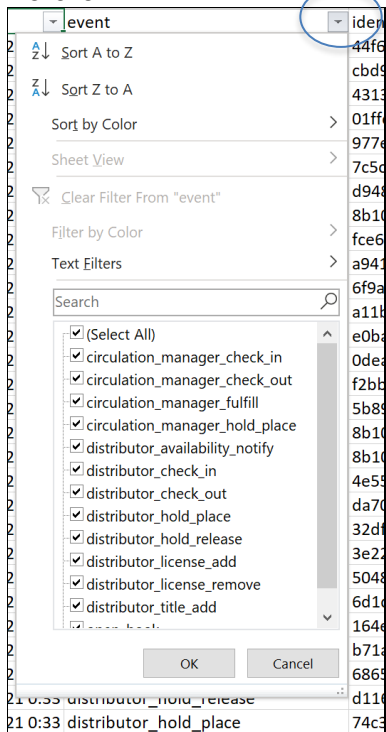

A second option is to create a filter in Excel to remove the “distributor” events. This will clean up the spreadsheet, so you only view the relevant entries. To create a filter, open the CSV file, click “Sort & Filter,” then “Filter.”

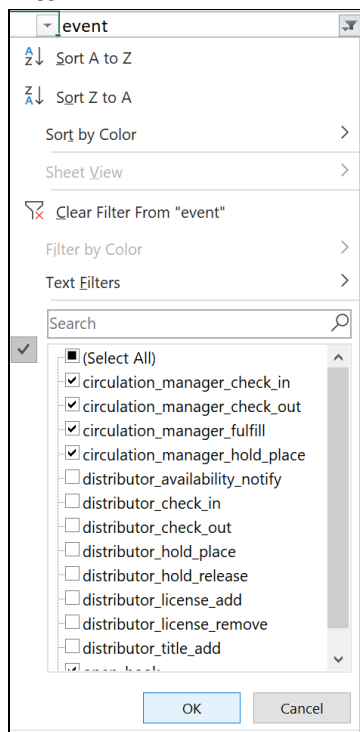

## Step #5

Once you have enabled filters, then go to the top of the event column (column b) and click the down arrow to remove the unwanted options. Check all the unwanted “distributor” events and then click “OK.” This will give you an updated spreadsheet reflecting only local library data in SimplyE.

Before:

After:

## Sample CSV file spreadsheet with the column b (event) sorted A-Z:
